

Turkish News Clickbait Detection

Mehmet Mert Tezcan

Clickbait Detection: Next-Level Clickbait Detection System using Deep Learning Techniques

Dataset Characterization

- 20,036 Turkish news titles collected
- 10,030 clickbait titles and 10,006 non-clickbait titles
- The "title", "label", and "site" columns might be useful
- Other features will be extracted from title
- If found, other datasets will be included and combined with the existing one

Methodology

- Data Preprocessing
- Feature Extraction and Tokenization
- EDA (Exploratory Data Analysis)
- Machine Learning & Deep Learning Models
- Hyperparameter Tuning
- Evaluation

Web App

- If time allows

Logistic Regression, Naive Bayes, SVC and Random Forest models will be trained and tested for the first part. Then LSTM will be applied and a detailed comparison will be provided.
